Submitter Info:

First Name: Richard

Last Name: Acanfrio

Mailing Address: 89-14 Gettysburg Street

City: Bellerose

Country: United States

State or Province: NY

ZIP/Postal Code: 11426

Email Address: richac1@yahoo.com

Organization Name: null

Comment: Dear Sirs/Madams:

In regards to the recent FCC ruling to regulate wireless and electronic devices:

Hardware Manufacturers and even the majority of software developers do not have their users security, or even usability in mind. They also refuse to continue to support older hardware or software with security or feature updates after a short time period leaving millions of people, who can't afford to buy new hardware or software, vulnerable, helpless and limited. This becomes an issue of National Security and Economic well being. It often becomes the responsibility of the communities that use these products to fix the security holes in them to help protect themselves and society, and to give themselves the features they need for increased usability and production. If this ruling would prohibit such software from being used on these wireless and electronic devices, more people would be victims to bad actors in society, but also innovation and competition would be stifled. Also keep in mind, that a backdoor for the good guys, also becomes a backdoor for the bad guys.

Thank you in advance for your understanding and willingness to listen to the people of this great country. I hope you make the right decision, to keep our hardware open and free as in freedom, which is what makes this country exceptional.

Sincerely,

Richard Acanfrio
